

Manufacturers' Shipments, Inventories, and Orders

March 1976

SERIES: M3-1(76)-3

FOR RELEASE: April 30, 1976 2:00 P.M.

William Menth
763-2502

All figures in text below are in seasonally adjusted current dollars.

New orders for durable goods rose \$3,015 million or 6.7 percent in March, the Bureau of the Census, Department of Commerce, reported today. This increase from \$45,017 million in February to \$48,032 million is the largest percentage increase since the 7.3 percent increase reported in April, 1975. Most of the increase was reported in the aircraft and parts industry where new orders rose from \$1,737 million in February to \$2,800 million in March—an increase of \$1,063 million or 61.2 percent. Nearly all other durable goods industries also reported increases with Primary Metals showing the second largest increase this month—9.8 percent or \$655 million to \$7,333 million. Since most non-durable goods industries do not have unfilled orders, the new orders for non-durable goods preliminary reflect the small increase in sales. The new orders for all manufactured products increased 3.5 percent or \$3,123 million to \$93,366 million.

Since the new orders received exceeded shipments unfilled orders increased 0.5 percent or \$586 million in March to \$119,493 million. With the exception of an \$80 million increase in July, 1975, this is the first increase in the unfilled orders backlog since this series began to decline 17 months ago. Since September, 1974, when unfilled orders were reported at \$143,124 million unfilled orders have declined \$24,217 million or 16.9 percent with an average decline exceeding \$1,400 million or 1.0 percent each month. The March increase in unfilled orders is shown predominantly in the aircraft and parts industry (increasing \$670 million or 3.4 percent to \$20,439 million) the motor vehicle and parts industry (increasing 9.6 percent to \$3,553 million) and the primary metals industries (increasing \$205 million or 1.5 percent to \$14,022 million). Unfilled orders for non-durable goods remained virtually unchanged at \$5,384 million.

Shipments of all manufactured products increased 2.1 percent or \$1,870 million to \$92,782 million. The increase in durable goods shipments of 3.8 percent or

\$1,746 million to \$47,446 million was counterbalanced by a small increase in shipments of non-durable goods of 0.3 percent or \$124 million to \$45,336 million. The increase in durable goods was largely due to a 10.7 percent or \$815 million increase in motor vehicle and parts and a 4.8 percent or \$170 million increase in primary metals. Most non-durable goods industries showed little change from February with a 2.9 percent or \$237 million increase in chemicals being offset by a 3.1 percent or \$184 million decrease in petroleum and coal products.

Inventories held by manufacturers increased 0.5 percent or \$762 million to \$148,090 million. The increase was evenly divided between durable goods industries which increased 0.4 percent or \$342 million to \$96,038 million and non-durable goods industries which increased 0.8 percent or \$420 million to \$52,052 million. Approximately one-third of the durable goods increase was the shipbuilding and railroad industries with most other durable goods manufacturers showing smaller increases. Inventories held by apparel manufacturers and petroleum and coal products manufacturers accounted for over half the non-durable goods increase.

SCHEDULED RELEASE DATES

The figures on the durable goods industries in this report supersede those issued earlier in the advance report on durable goods. The present report is based on more complete reporting, but the estimates are also considered preliminary. Final figures will appear as historical data in the report to be published for next month. The advance report durable goods for April is scheduled for release on May 21, 1976 and the full report is scheduled for release on June 2, 1976.

This report contains data on an unadjusted and seasonally adjusted basis. However, the data are not adjusted for price changes. For an explanation of terms used in this report see appendix following table 5.

U.S. Department of Commerce BUREAU OF THE CENSUS

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233 or any Department of Commerce District Office. Price: 15 cents per copy, \$1.50 per year.

¹During 1968 manufacturers in ordnance, communications, aircraft and aircraft parts, and shipbuilding industries began to provide aggregate figures on shipments, orders, and total inventories of work performed for the Department of Defense. The results of these reports are included in the defense series. ^PPreliminary. ^RRevised. ¹Shipments and new orders adjusted for trading-day and calendar-month variations; unfilled orders and inventories as of end of month. ²The supplementary series are regroupings of the separate industry categories as follows:

Household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household appliances; ophthalmic goods, watches, and clocks; and miscellaneous personal goods.
 Capital goods industries - The capital goods industries series is comparable to the previous Producers' Capital Goods and the Defense Products old series categories.
 Nondefense products - Machinery, except electrical, excluding farm machinery and equipment and machine shops, electrical machinery excluding household appliances and electronic components, and the nondefense portions of shipbuilding and repairing and railroad equipment, communication equipment, aircraft and aircraft parts, and ordnance.
 Defense products - Based on separate reports on defense work filed by large defense contractors in the following industries: ordnance, communications, aircraft and aircraft parts, and shipbuilding. The data are comparable to those published annually in the MA-175, Shipments of Defense-Oriented Industries, for the specified industries.

Appendix

The following is a description of the survey and definitions used. These are provided to clarify the meaning of the items involved and do not represent any revisions from those definitions previously employed.

DESCRIPTION OF SURVEY

The Manufacturers' Shipments, Inventories, and Orders survey provides monthly figures that are comparable to the annual totals published each year in the Annual Survey of Manufactures (ASM). The ASM is based on a sample of approximately 60,000 manufacturing establishments drawn from the 5-year census universe of about 310,000 establishments. In the ASM, each manufacturing establishment provides data on employment, payrolls, shipments, cost of materials, capital expenditures, and inventories as well as other selected items. The establishments do not provide information on unfilled orders or new orders. Since the ASM is establishment based, it provides data for each of the 425 manufacturing industries in the Standard Industrial Classification System (SIC) and area data for industry groups.

The monthly survey M3-1 does not provide information at the complete SIC industry detail because of the smaller size of the reporting panel and the fact that most companies cannot provide shipments, inventories, and orders data monthly for individual establishments.

The monthly reporting panel consists of approximately 5,000 reporting units and includes virtually all companies with 1,000 or more employees and a sample of the smaller ones. The reporting unit typically comprises the entire operations of a company although many of the larger diversified companies file separate divisional type reports for their operations in different industries.

Most of the reporting units include mixed industry activity even within the broad industry categories of the monthly survey. The survey methodology assumes that the month-to-month changes of the reporting units classified in each industry category represent effectively the month-to-month movements of the establishments in the SIC industries which make up the category. Thus, the monthly reports are used to update the ASM estimates by using a link relative of matched companies in each industry.

EXPLANATION OF TERMS

Value of Shipments—Shipments in the monthly survey are equivalent to value of shipments as reported

in the ASM which are received or receivable net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Included in shipments are the value of all products sold, transferred to other plants of the same company, or shipped on consignment.

Shipments also include receipts of establishments in the industry for contract work performed for others, resales, receipts for miscellaneous activities such as the sale of scrap and refuse; value of installation and repair work performed by employees of the plant; and value of research and development performed at the plant. In the aircraft industry and shipbuilding, the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the input of the materials and labor and the shipments of the completed aircraft or ship. In the annual survey, therefore, the value of work done during the year is requested rather than the value of shipments.

The value of shipments figures developed from the ASM contain duplication at the all manufacturing and industry group levels since the products of some industries are used as materials by other industries within the industry group. With the exception of motor vehicles, it is not significant at the 4-digit SIC group level. Since the M3-1 industry categories typically are groupings of industries, this duplication is significant for the all manufacturing, durable goods and nondurable goods categories and the various market groups. The significance of the duplication within the specific M3-1 industry groups varies depending on the 4-digit industry composition of these groups. It is most pronounced in a few highly integrated industry areas such as primary metals and motor vehicles and parts.

Since most monthly reports are for the entire company or major divisions rather than establishments, the companies are requested to report net sales, i.e., total company billings after discounts and allowances. Companies which file divisional reports are requested to treat transfers from one division of the company to another as if they were net sales to outside customers. Although this definition of shipments in the monthly reports differs from that used in the annual establishment reports, it is assumed that the month-to-month changes in company sales in the industry are representative of the month-to-month shipments of the establishments in the industry.

Inventories—End-of-month inventories in the monthly survey are identical in definition to the end-of-year inventories in the ASM. In the ASM, respondents are asked to report inventories of individual establishments at approximate current cost if

3 1262 08589 4698

feasible; otherwise, "at book values." Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the definition of the aggregate inventories for establishments in an industry is not precise. The figures on the change in inventories from one period to the next are of greater significance than the actual aggregates.

Inventories are reported by stage of fabrication: (a) finished goods; (b) work in process; and (c) materials, supplies, fuel, and other inventories. In using inventories by stage of fabrication at the all manufacturing and 2-digit industry levels as well as for the durable and nondurable goods sectors, it should be noted that a finished product of one industry may be a raw material for another industry at the next stage of fabrication. Insofar as the durable and nondurable goods sectors and also the 2-digit industry groups contain industries with successive stages of processing, the same type of commodity may be included under different inventory categories in the aggregate statistics.

New Orders Received and Unfilled Orders—Orders as reported in the monthly survey are net of cancellations during the month. They include orders received during the period and also filled during the period as well as those orders received for future delivery. They

also include the net sales value of contract change documents which increase or decrease the sales value of the unfilled orders to which they relate. Orders include only those supported by binding legal documents such as signed contracts, or letter contracts. In case of letter contracts the full amount of the sales value is included if the parties are in substantial agreement on the amount; otherwise, only the funds specifically authorized to be expended are included. The respondent is instructed to deduct the sales value of partial or complete cancellation of existing orders.

Unfilled orders include orders as defined above that have not yet passed through the sales account. Generally, unfilled orders at the end of the reporting period are equal to unfilled orders at the beginning of the period plus net new orders received less net sales.

While both new orders and unfilled orders are used in reviewing individual company reports for consistency, only unfilled orders are estimated directly in the tabulated totals. New orders are derived from the shipments plus net change in unfilled orders for each industry category. This procedure is followed for seasonally adjusted data as well as for the unadjusted data. Shipments and unfilled orders are seasonally adjusted independently. Seasonally adjusted new orders are derived from seasonally adjusted shipments and seasonally adjusted unfilled orders.
